Ground Searching Metal Detector

地下金属探测器

## MD-5006 Ground Searching Metal Detector

### Functions:

This kind of detector is composed of superlative quality components. It has such good characteristics as wide detecting scope, accurate orientation, good discrimination ability, easy operation, etc. The metal detector is mainly used to detect and discriminate metal goods and treasure which are underground. Apart from its military use, it can also be used in such fields as: safe-exam, ancient relic's investigation and mine detection. So it is a treasure-seeker with reasonable price and good values.

### Technical Specification:

Power: 8pcs 1.5V

Emitting frequency: 6.99 KHz

Signal frequency: 437 KHz

Indicator: horizontal indicator

Function: detecting and discriminating metals

(It can discriminate ferrous and non-ferrous metals)

Control: Sound control

Discrimination control

Adjustion control

On-off control

Working current: 300mA MAX at MAX Volume

Detecting depth: (Max): 2-3.5m

Sensitivity: It can reach a depth of 25-35cm for a 25 cent coin

Export packing: 4PCS /Carton 0.1736CBM (84\*31\*17cm)

Gross weight: 3KG
